SUMMARY

Computer Science & Engineering (Artificial Intelligence) undergraduate with hands-on experience in Python, SQL, ETL, data processing, data modeling, data warehousing, and databases. Built data-driven solutions involving structured data transformation, analytical data models, REST APIs, PostgreSQL, and document processing pipelines. Strong foundation in Data Engineering, DBMS, problem-solving, and developing reliable data solutions.

TECHNICAL SKILLS

Programming & Querying: Python, SQL

Data Engineering: ETL, Data Transformation, Data Processing, Data Modeling, Data Warehousing, Data Pipelines, Apache Kafka, Snowflake Schema, Big Data Fundamentals

AI & Generative AI: Generative AI, LLM APIs, LangChain, RAG, Embeddings, FAISS, Vector Search

Data Analytics: Pandas, Power Query, Power BI, DAX, Excel

Databases: MySQL, PostgreSQL

Backend & APIs: Django, Django REST Framework, Flask, REST APIs

Tools & Cloud: Git, GitHub, Docker, AWS Fundamentals, Postman, VS Code

PROJECTS

Uber Operations Analytics & Intelligence System | Power BI, Power Query, DAX | [GitHub](#)

- Processed and transformed 50K+ Uber trip records using Power Query, including data cleaning and preparation for downstream analysis.
- Applied data modeling concepts to organize trip, revenue, cancellation, and operational data into a structured analytical model.
- Developed DAX measures and interactive Power BI dashboards to analyze revenue, demand, trip duration, cancellations, and operational trends.

TalentFlow AI — Enterprise HR & Employee Lifecycle Management Platform | Django, Django REST Framework, PostgreSQL, JWT, REST APIs | [Live Demo](#)

- Developed a modular HRMS backend using Django and DRF for employee, department, attendance, leave, and performance management.
- Designed RESTful APIs with JWT authentication and role-based authorization for Admin, HR, Manager, and Employee users.
- Implemented database-backed workflows using PostgreSQL, with API validation and testing through Postman; deployed the application on Render.

AI-Powered Medical Report Analyzer | Python, LangChain, RAG, FAISS, LLM, Embeddings | [GitHub](#)

- Built a RAG-based application to process PDF documents and enable natural-language querying over extracted document content.
- Developed a document processing pipeline involving text extraction, chunking, embedding generation, and FAISS-based vector indexing for efficient retrieval.
- Implemented semantic retrieval with source-page references to provide relevant context to the LLM and improve data traceability and response verification.

EDUCATION

Bachelor of Technology, Computer Science and Engineering (Artificial Intelligence)

Meerut Institute of Engineering and Technology (MIET) | Minor: Robotics | 2023 – 2027

Coursework: DSA, DBMS, Data Warehousing & Mining, Data Analytics, Software Engineering

Higher Secondary (Class XII), CBSE — K.V. Public School

Mathematics / Physics / Chemistry | 2021 – 2022

CERTIFICATIONS

- SQL (Intermediate) Skill Certification — HackerRank
- AWS Academy Graduate — Cloud Foundations
- Data Analytics with Python and Power BI — EduSkills
- Deloitte Data Analytics Job Simulation — Forage
- Deloitte Technology Job Simulation — Forage
- Google AI-ML Virtual Internship — EduSkills
- Python Complete Course and Flask Framework, HTML Essentials — Udemy
